Billing Software — User Manual

Everyday guide for the counter

Version 1.0.0

Jalgaon, Maharashtra

Keep this manual near the billing computer

1. Opening the software

Double-click the **Prem Jewellers Billing** icon on the desktop. The software opens straight onto the **Billing** screen with a new invoice number already prepared.

The software works without internet

Every bill is saved on this computer. If the internet is off, the top-right corner shows *Offline — billing continues*. You can keep billing, printing and saving exactly as normal. Internet is only needed for cloud backup and for sending a bill on WhatsApp.

The five screens

SCREEN	WHAT IT IS FOR
Billing	Making a new bill. This is where you spend the day.
Customers	The customer book, with each customer's past purchases.
Invoices	Every bill ever made. Search, reprint, download.
Dashboard	Today's sales, this month, this year.
Backup & Settings	Shop details, backup, and the emergency button.

Move between screens by clicking the tabs at the top, or by holding **Ctrl** and pressing **1** to **5**.

2. Making a bill

- 1 Customer.** Start typing the customer's name, mobile number or GST number in the **Name** box. If they have bought from you before, their details appear in a list — use the arrow keys and press **Enter** to pick them. Everything else fills in by itself.
For a new customer, simply type their details. They are saved automatically when you save the bill — there is nothing extra to do.

- 2 Items.** Fill the item table exactly as you would write the paper bill:

COLUMN	WHAT TO ENTER
HSN	7113 for gold and silver jewellery (already filled in)
Particulars	Description, e.g. <i>Gold Necklace 22K</i>
Gross Wt (g)	Total weight including stones
Net Wt (g)	Metal weight you are charging for
Rate (₹/g)	Today's rate per gram
Making	Making charge — see below

- 3 **Making charge.** Next to the making charge box there is a small selector with three choices. Pick whichever matches how you quoted the customer:
 - ₹ — a flat amount for the item, e.g. ₹1,500
 - /g — an amount per gram, e.g. ₹450 per gram
 - % — a percentage of the metal value, e.g. 12%
- 4 **Check the total.** The right side updates as you type — taxable value, CGST, SGST, round off and the grand total, with the amount written out in words. GST is worked out automatically at 3%.
- 5 **Payment.** Click **Cash**, **Cheque** or **Online**. For cheque or online, a box appears for the cheque number or transaction reference. If the customer is paying only part of the amount today, type what they paid in **Amount Received** and the balance is shown.
- 6 **Save and print.** Press + , or click the big red **Save & Print** button. The bill is saved and the printer dialog opens.

Typing faster

Press inside the item table to jump down the same column, and a new line is added automatically when you reach the bottom. You never need the mouse to make a bill.

3. Printing, PDF and WhatsApp

Printing

Press **Ctrl** + **P**. In the printer window make sure it is set to **A4, Portrait**, and scale **100%**. Do not use "Fit to page" — it will move the weight columns out of line.

To see the bill before printing, press **Ctrl** + **Shift** + **P** for a preview. What you see is exactly what will be printed.

Saving a PDF

Press **Ctrl** + **E**, choose where to save, and the file is created. Your file manager opens with the PDF highlighted.

Sending on WhatsApp

Press **Ctrl** + **W** or click **WhatsApp**. What happens next depends on how the software has been set up:

- **Normal setup:** WhatsApp opens on the customer's chat with the message already written, and the PDF is highlighted in your file manager. Drag the PDF into the chat and send.
- **Automatic setup:** the PDF is sent to the customer by itself.

4. Finding and reprinting an old bill

Go to **Invoices** (**Ctrl** + **3**). You can:

- Type a bill number, customer name or mobile number in the search box
- Choose a date range — Today, Last 7 days, Last 30 days, or All
- Filter by Cash, Cheque or Online

Each row has buttons: **View** to see it, **Reprint** to print another copy, **PDF** to save it, **WhatsApp** to send it, and **Duplicate** to start a new bill using the same items.

Reprints are marked

A reprinted bill carries a small *Duplicate Copy* mark, so it is never mistaken for the original.

Correcting a mistake

A bill made **today** can be corrected: open **Invoices**, find it, and click **Edit**. Make the change and save again.

A bill from an earlier day cannot be changed, because it has already gone into the books. Instead click **Cancel** on it and make a fresh bill. A cancelled bill stays in the records for your GST return but stops counting as a sale.

5. Customers

Go to **Customers** ( + ). Search by name, mobile, GST number or PAN. Click any customer to see everything they have ever bought and how much they have spent in total.

Customers are saved automatically every time you bill someone, so this list builds itself.

6. Backup — please read

Your bills live on this computer. If the computer is lost, stolen or damaged, the bills go with it unless you have a backup. Doing this takes under a minute.

Every day: save a backup file

- 1 Go to **Backup & Settings** (**Ctrl** + **5**) and click **Offline Backup**.
- 2 Click **Save Backup File**.
- 3 Save it onto a pen drive, and keep the pen drive somewhere other than the shop.

You can also set this to happen by itself: choose a folder under **Automatic Backup Folder** and set **On Closing the App** to write a backup. Then a backup is written every time you close the software.

Restoring from a backup

Click **Restore From File** and choose your backup file. Bills already on the computer are not duplicated — the software matches them by bill number.

Cloud backup

If cloud backup has been set up for you, click **Back Up Now** under **Cloud Backup** to send everything to your online account. **Restore From Cloud** brings it all back.

7. Emergency Backup & Clear Device

This permanently erases all bills and customers from this computer

Use it only if the computer may be seen by someone who should not see your records.

What the button does, in this order:

- 1 Sends every bill and customer to your online account.
- 2 Reads it all back and checks it arrived complete and correct.
- 3 Only then erases everything from this computer.

If the upload fails, or the check fails, **nothing is deleted** and the software tells you what went wrong. Your shop details stay, so the software still works normally afterwards.

To use it: **Backup & Settings** → **Emergency** → type **BACKUP AND CLEAR** exactly → confirm.

To get everything back later, use **Restore From Cloud**.

There is no undo

Once cleared, the only copy is the one online. Make sure cloud backup has been tested and works before you ever use this button.

8. Keyboard shortcuts

Print this page and keep it near the counter.

Making a bill

KEYS	WHAT IT DOES
F2	Start a new bill
Ctrl + S	Save the bill
Ctrl + Enter	Save and print
Ctrl + P	Print
Ctrl + Shift + P	Print preview
Ctrl + E	Save as PDF
Ctrl + W	Send on WhatsApp
Alt + N	Add another item line
Enter	In the item table: move down the same column

Moving around

KEYS	WHAT IT DOES
Ctrl + 1	Billing
Ctrl + 2	Customers
Ctrl + 3	Invoices
Ctrl + 4	Dashboard
Ctrl + 5	Backup & Settings
F1	Show this shortcut list on screen
Esc	Close a window that has opened

9. If something goes wrong

PROBLEM	WHAT TO DO
The bill prints too small or columns do not line up	In the printer window set scale to 100% , not "Fit to page", and paper to A4 .

It says <i>Offline</i>	Nothing is wrong. Billing, printing and saving all work. Only WhatsApp and cloud backup need internet.
A customer's details did not fill in	Type at least two letters and wait a moment for the list to appear, then pick from the list rather than typing over it.
The bill number is wrong	You can type over it in the Invoice No box before saving. If the number is already used by another bill, the software will tell you.
I cannot edit an old bill	Only today's bills can be edited. Cancel the old one and make a fresh bill.
The software will not start	Restart the computer and try again. If it still fails, contact your supplier — do not reinstall, as that is not needed to fix it and your bills are safe on the computer.

Where your bills are stored

All records are kept on this computer at

```
%APPDATA%\Prem Jewellers Billing\prem-jewellers.db
```

Never delete or move this file. To make a copy, use

Save Backup File

instead.
